

OLC AQUATICS

The OLC aquatic design team provides innovative design solutions and superior technical skills to athletic clubs, spas, hotels, recreation facilities, and even with other architectural firms, whether the project scope is a single exercise pool or a multi-use aquatic complex. We offer a seamless process that addresses the aquatic planning, budgeting, design and construction phases throughout the project.

Our aquatic designers work with each client, listening to their needs and concerns. Then our aquatic experts think carefully through every project aspect like costs, location, size, features, safeguards and operational expenses.

Facility owners and managers around the country trust and anticipate that an OLC-planned and designed aquatic center will encompass their unique vision and that the finished facility will exceed the expectations of their clients, customers and community for many years.

Our dedicated aquatics group will enhance the total project team by:

- Utilizing a multi-disciplined approach to integrating aquatic design
- Producing innovative, creative, multi-use program capabilities
- Incorporating aesthetics and function into each facility's design
- Maintaining a high standard of safety features while controlling costs
- Integrating water circulation, filtration and sanitation systems that ensure clean, safe water
- Eliminating typical pool odors common to many other facilities through innovative mechanical design
- Reviewing all aquatic facility designs to ensure that the project exceeds customer expectations
